

DELAWARE COMPENSATION RATING BUREAU, INC.  
F-CLASS FILING

U. S. Longshore and Harbor Workers' Compensation Coverage Percentage

In support of a modification to the United States Longshore and Harbor Workers' Compensation Coverage Percentage, which represents a load factor applied to state act coverage rates, the DCRB presents the following exhibits. In these exhibits, prescribed benefit levels under Delaware (DE) law are compared to those given by the Federal (USL) law.

Exhibit I outlines the essential features of current USL and DE workers compensation laws. Note that in footnotes on page 2 are the national and statewide average weekly wages that were used in developing the exhibits that follow.

Exhibit II summarizes the DCRB's findings. The ratios in column 2 are drawn from the subsequent exhibits. The weights represent the distribution of losses by type of injury from the December 1, 2023 Rate and Loss Cost Filing. The proposed USL percentage is 108.4%, an decrease from the current percentage of 113.3%.

Starting with Exhibit III and proceeding through Exhibit XII, factors are developed that are used in Exhibit II. For each type of injury, the benefit level is first developed under the state act, then the corresponding benefit under the USL act is developed. The respective ratios of these benefits are carried forward to Exhibit II.

The distribution of dependents in Exhibits III-A and III-B and of cases in Exhibits V-A and V-B are from the Workers Compensation Injury Table. The distribution of widows on Exhibits III-C and III-D were compiled from the Bureau's own data in Pennsylvania for the ten most recent policy years. All annuity values are derived from the 2013 United States Life Tables.

Please note that the USL&H loading factor does not include the Federal Assessment, which is shown in the Expense Loading.
